PROFESSIONAL SUMMARY

Staff Software Engineer with 19 years of experience specializing in frontend development, application architecture, and technical leadership. Extensive experience designing and building complex, high-performance web applications using Vue.js, JavaScript, and React. Proven ability to independently architect frontend solutions, collaborate across engineering teams, translate customer requirements into technical implementations, and mentor engineers. Experienced in defense technology, identity management, telecommunications, and enterprise software.

TECHNICAL SKILLS

Frontend Vue.js, JavaScript, React, HTML5, CSS3, OpenLayers, Web Workers

Testing Jest, Cypress

Additional Experience TypeScript, Java, PHP, Python, SQL, Docker, Kubernetes

Development Tools Git, GitHub, GitLab, Claude Code, Jira, Confluence

Technical Leadership Frontend Architecture, System Design, Cross-Functional Collaboration, Agile Development, Engineering Mentorship, Technical Documentation

PROFESSIONAL EXPERIENCE

REBELLION DEFENSE | Staff Software Engineer

July 2021 – October 2026

- Architected, designed, and built the frontend of a high-performance geospatial tracking application from the ground up using Vue.js, JavaScript, and OpenLayers, serving as the primary frontend engineer.
- Designed and implemented parallel data processing using Web Workers, enabling streaming and playback of more than 10,000 objects per second at faster-than-real-time speeds.
- Developed, tested, and maintained frontend features across two additional applications supporting simulated battlespace missions and system vulnerability management using React, Vue.js, Jest, and Cypress.
- Collaborated with backend engineers, product managers, and clients to define requirements, design technical solutions, and deliver new application capabilities.
- Collaborated with engineering teammates to support deployment of a defense application into a U.S. Navy customer's secure environment.
- Mentored junior engineers on frontend development practices, implementation strategies, and technical problem-solving.

F9 TEAMS | Principal Software Engineer

April 2021 – July 2021

- Served as an embedded contractor within the U.S. Air Force's Kessel Run software factory, contributing to its Identity Management platform.
- Developed and maintained application features using React, TypeScript, and Java to support authentication and user management across Air Force applications.
- Collaborated with engineering teams and application users to troubleshoot technical issues, support integrations, and improve platform functionality.

PROFESSIONAL EXPERIENCE (CONTINUED)

SYNACOR, INC. *June 2007 – March 2021*

Senior Engineering Manager *October 2019 – March 2021*

- Led an Agile team of four backend engineers developing Java microservices to integrate SiriusXM with Amazon Alexa and Google Home.
- Worked directly with SiriusXM to gather requirements, translate business needs into technical tasks, and coordinate implementation with engineers.
- Managed engineer performance, established individual development goals, and provided ongoing coaching and professional development.
- Collaborated with product owners to prioritize engineering work, manage the backlog, and coordinate delivery through Agile sprint planning and ceremonies.

Principal Engineer *February 2012 – October 2019*

- Served as a technical leader within the client deployment team, collaborating with multiple product engineering teams to deliver enterprise software solutions to more than 40 telecommunications clients.
- Evaluated client requirements and platform capabilities, designed technical solutions, and guided engineering teams through custom functionality and product integrations.
- Partnered directly with major clients, including AT&T, CenturyLink, and Verizon, to gather requirements, resolve technical challenges, and coordinate delivery.
- Provided technical direction for frontend development and customization across portal, video, and identity management platforms using JavaScript, React, Preact, HTML, and CSS.
- Created technical design documentation and trained engineers on new products, platform capabilities, and implementation approaches.

Software Engineer → Engineering Manager *June 2007 – February 2012*

- Progressed through increasingly senior engineering and leadership roles, ultimately managing a team of 10 frontend engineers responsible for customizing and deploying enterprise web applications.
- Contributed hands-on frontend development using HTML, CSS, JavaScript, and PHP while providing technical guidance and overseeing client implementations.
- Managed engineering priorities and coordinated delivery of customized solutions for telecommunications clients.
- Participated in hiring, onboarding, mentoring, and professional development of frontend engineers.

EDUCATION

Rochester Institute of Technology | Rochester, NY

Bachelor of Science in Imaging and Photographic Technology | Minor in Communications | 2007
